

# Customer **SUCCESS** story

Zachry Construction Corporation is an internationally recognized construction and industrial maintenance service company. Consistently recognized by Engineering News Record as a top contractor, Zachry's major markets include heavy construction, building construction, power, industrial maintenance and industrial process.

Zachry uses Oracle Primavera Contract Management organization-wide to improve and increase the productivity of their project members located both domestically and internationally. Like many organizations today, Zachry has a corporate IT initiative to outsource applications and consolidate internal corporate IT staff. Zachry turned to LOADSPRING Solutions for a world-class, Internet-based infrastructure and the level of IT support needed to ensure the successful deployment of their applications.

## The solution

LOADSPRING's *SpringBoard Portal*™ was selected as the on-line application management system to deliver Oracle Primavera Contract Management and Enterprise scheduling applications and related data to Zachry's internal and external project members. LOADSPRING was able to deliver Zachry's solution within a week.

By having their applications and data centrally located on LOADSPRING's servers, Zachry team members from three continents can access their project management software and keep project information up-to-the-minute from any location, enabling real-time accurate management review. LOADSPRING's *SpringBoard* has 128-bit encrypted authentication, making communications between team members not only easy, but more secure than ever before.

LOADSPRING's *SpringBoard* became the platform of choice for Zachry's project controls applications. As a result, Zachry is now:

- Reducing costs charged to departmental budgets by decreasing IT expenses related to remote software deployments across different state organizations.
- Improving timeline and deadline completion by standardizing a dispersed team on one central set of applications and data.
- Improving efficiencies by radically decreasing the time it took to deliver and manage access (including training and support) to LOADSPRING's *SpringBoard* and project software to local business partners.

*"LOADSPRING's SpringBoard Portal has not only saved us months getting our project management applications up and running on the cloud, but it has given us the ability to share the applications with team members and business partners.*

*The level of service in working with their staff has been impeccable."*
