LoadSpring™ InVizion®

CUSTOMER SUCCESS STORY

HOW INVIZION SCALED ITS STRATEGIC CAPITAL PLANNING SOFTWARE TO THE CLOUD WITH LOADSPRING'S UNIFIED PROJECT PLATFORM

Giving customers the assurance of government-level security, guaranteed uptime, and resilient disaster recovery—without adding IT complexity.

EXECUTIVE SUMMARY

Founded in 2013, InVizion® helps asset-intensive organizations transform complex capital programs and budgets into clear, data-driven plans. Its patented, configurable software enables teams to model unlimited multi-year budget scenarios, balance priorities and funding constraints, and turn strategy into action by tracking progress against approved programs.

For years, InVizion customers relied on on-prem deployments. As organizations modernized their IT strategies, they began asking for faster, more secure ways to implement the solution — without the burden of managing infrastructure. About ten years ago, those requests accelerated as customers' procurement and compliance teams began requiring cloud-hosted solutions that met strict security and support standards.

To meet that demand, InVizion partnered with LoadSpring and brought its solution to the cloud through LoadSpring's Unified Project Platform (UPP). The partnership gives InVizion and its customers the best of both worlds: the performance, reliability, and security of LoadSpring's platform, combined with the flexibility and innovation of InVizion's planning software.

InVizion®

"Our partnership with LoadSpring gives us the right combination of security and control over deployment options," says Kristy Neckowicz, President of InVizion. "LoadSpring lets us focus on building great software, while our customers get the performance and reliability they expect from a cloud solution."

By leveraging UPP, InVizion has expanded its reach, accelerated deployment for new customers, and strengthened its ability to serve industries that demand the highest levels of compliance — all while continuing to innovate where it matters most.

THE CHALLENGE

As demand grew for its software, InVizion began to see a clear trend: customers wanted the same powerful solution, but they wanted it delivered faster and with their own identity management and security standards. Those requests became consistent across contracts — a signal that expectations were changing.

For InVizion, the challenge wasn't in the software itself. It was in how to deliver it. Customers needed a cloud option that met stringent IT requirements without slowing deployment or adding complexity. And InVizion needed a trusted cloud partner that could provide that level of security and control while allowing them to stay focused on innovation.

That search led them to LoadSpring.

THE SOLUTION

When InVizion decided to bring its software to the cloud, the goal was clear: deliver faster deployment and stronger security without adding IT complexity. Customers were asking for a cloud option that met strict compliance requirements, and InVizion wanted to provide it while maintaining the control and reliability its on-prem clients had come to expect.

That search led to LoadSpring and its Unified Project Platform (UPP)—a cloud environment purpose-built for project-based software. LoadSpring offered exactly what InVizion needed: proven speed, trusted security, and hands-on expertise.

InVizion®

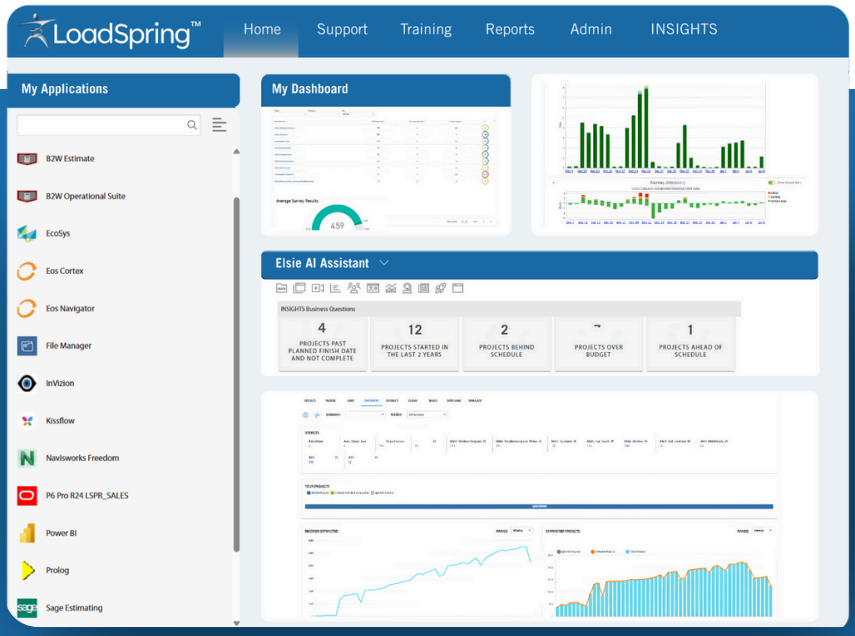

LoadSpring's capabilities aligned perfectly with InVizion's priorities:

- **Up to 200% faster deployments** compared to traditional on-prem implementations
- **99.9% guaranteed uptime** for continuous reliability, including monitoring, resilient disaster recovery, and business continuity capabilities
- **24/7/365 expert support,** often responding in **as little as 15 minutes**
- **SOC 2 Type II certification** and alignment with **ISO 27001 standards**
- **Government level security and regulatory standards support**

By hosting on LoadSpring's UPP, InVizion now delivers the speed and security its customers demand—while staying focused on what it does best: developing innovative software that helps organizations make better, data-driven decisions.

"We enjoy our special collaboration with LoadSpring's technical team," Kristy adds. "They really understand what strategic applications like ours need from a hosted platform."

InVizion

THE IMPACT

Since partnering with LoadSpring, InVizion has strengthened both its software offering and its customer relationships. By delivering InVizion through the Unified Project Platform, the team can now offer a true software-as-a-service model that meets customers' security and compliance needs while removing the friction of traditional deployments.

The partnership allows InVizion to focus on what it does best—building and enhancing its planning software—while LoadSpring manages the hosting infrastructure behind the scenes.

InVizion's customers have noticed the difference too. Deployments are fast, support is extremely responsive, and confidence in the platform has never been higher. With LoadSpring handling the infrastructure, InVizion's team is free to keep advancing its analytics, scenario planning and integration capabilities—delivering even more value to its customers over time.

"Partnering with LoadSpring allows us to focus on our core competency—developing innovative program planning software—while knowing our customers' environments are secure and well supported," says Kristy.

InVizion

LOOKING AHEAD

For InVizion, the partnership with LoadSpring continues to grow in scope and value. What began as a way to deliver their software faster and more securely has become a foundation for ongoing innovation.

InVizion has begun to leverage LoadSpring INSIGHTS™ and Elsie AI™ to expand what customers can do with their data. INSIGHTS will make it easier to connect InVizion with other enterprise systems—bringing more context and visibility to program and budget decisions. Elsie AI will build on that capability, helping users identify insights and trends quickly through natural-language queries and smart recommendations.

InVizion

As InVizion continues to innovate for asset-intensive organizations, LoadSpring's Unified Project Platform will remain a key part of that journey—providing the secure, intelligent infrastructure that supports their next generation of planning and analytics solutions.

ABOUT LOADSPRING

For 25 years, LoadSpring Solutions has been at the forefront of transforming capital-intensive projects worldwide, supporting over $1 trillion in project value and serving more than 100,000 users across 5,000 organizations. As the industry's most trusted digital transformation partner, LoadSpring leverages its deep expertise in cloud technology, data modernization, and AI-powered analytics to deliver customized solutions, drive measurable results, and maximize ROI for the world's most complex capital projects.
