TELECOM AND CLOUD HOSTED BIG PROJECT SOFTWARE: MISSION IMPOSSIBLE?

The telecom industry is rapidly moving towards widespread cloud adoption. Between now and 2025, telecom cloud spending will grow from $25 billion to nearly $75 billion. The reasons are numerous and include items such as:

- Large-scale projects demand high-performance, complex but flexible project software.

- Government and consumer-required security measures are becoming more numerous and increasingly intricate.

- Gathering and utilizing project intelligence is critical for streamlining operations and maintaining competitiveness.

Meeting these demands shouldn't be an impossible mission when you have the right team. With the right cloud hosted solution provider, you have a team that can help you prepare, stay focused, and uses the best technology without taking unnecessary risks. Your mission awaits! Read on.

LOADSPRING

CLOUD HOSTED SOFTWARE: IMPOSSIBLE GADGETS IN REAL WORLD CLOUDS

Today's telecom project managers face challenges like few other industries. These high-tech hurdles include rolling out 5G, providing the infrastructure to handle extraordinary amounts of data, and coordinating multi-team worldwide projects on the fly. These challenges require best-of-breed project software that performs. That's where the cloud comes in.

Meet the High Performing Team

LoadSpring hosts premium project software in its proprietary cloud architecture and fine-tunes the performance to run faster than locally installed versions can. **LoadSpring hosted software runs 60% faster than AWS.** Through the flagship LoadSpring Cloud Platform, team members open their programs and operate them just like they usually would. Everything works the same, except faster and more reliably. Your cloud experience is a clean and simple one.

Your Very Own "Cyber-Ops" Specialist

Wouldn't it be nice to have a "cyber-ops specialist" in your ear via a miraculous microphone, instructing your IT team on performing complex, troublesome and time-consuming patches, and updates? With LoadSpring, these updates are done in the cloud by our experts within your given timeframe. This service reduces your IT workload significantly, allowing them to focus on supporting your teams rather than managing software. LoadSpring also provides technical support for cloud services and hosted applications 24/7/365; **your tickets are picked up within 15 minutes or less**, further reducing the burden on internal IT.

Anywhere Access to Extraordinary Applications

No mission is complete without the best gadgets in the business. In the Mission Impossible movies, Ethan Hunt uses a well-stocked arsenal of high-tech gadgets to execute death-defying stunts and complete the mission flawlessly. Your project teams also rely on high-performing, best-in-class project management, business intelligence, scheduling, geospatial, and estimating applications for his team, to name a few. Secured in LoadSpring Cloud Platform, your applications are ready to be deployed and provisioned for teams to access easily from anywhere.

LOADSPRING

CLOUD HOSTED SOFTWARE: IMPOSSIBLE GADGETS IN REAL WORLD CLOUDS (continued)

Hosted Applications:

- **BIM/CAD**
- **Cloud Business Intelligence Solutions**
- **Document Management**
- **Geospatial**
- **Project Portfolio**
- **Scheduling**
- **Specialized and Custom Tools**

Mission Success Factors

LoadSpring Cloud Platform delivers your hosted software with built-in, value-added success factors:

- **Environment Time to Value:** LoadSpring delivers a fully functioning ecosystem of applications in a secure cloud 75% faster and 50% cheaper than traditional in-house IT.

- **Project Time to Value:** LSPR delivers projects to existing environments 1,000x faster in minutes vs. traditional IT, which takes days.

- **User Provisioning:** Save 20% time allocating correct apps and user competency to the right project team. Reassign licenses as quickly as projects ramp up or down.

- **Centralized access:** Access all your mission-critical applications from one dashboard, safely and securely from anywhere.

- **Built-in training:** Onboard teams faster with LoadSpring Academy, accessible straight from the platform.

LoadSpring doesn't just host your software; we drive mission success.

LOADSPRING

YOUR DATA IS TOP SECRET

Villains are always looking for their next data heist, and government regulations regarding privacy are on the rise. Data leaks of consumer information can cause financial ruin for consumers and companies alike. For these reasons and more, security is a top concern for telecom companies. We understand, and we keep your data guarded by government and Fortune 500-grade security measures, including cloud data recovery if disaster strikes.

LoadSpring ensures your data is accessible only to the people that need it. Our practices are under constant review for updates, and whenever software security patches are required, we apply them on the fly. Think of it as having the best secret agents guarding your data day and night without fail.

Category	Percentage
Data Loss/Leakage	69%
Data Privacy/Confidentiality	66%
Accidental Exposure of Credintials	44%
Incident Response	44%
Legal and Regulatory Compliance	42%
Data Sovereignty/Residency/Control	37%
Visibility and Transparency	30%
Acailability of Serivices, Systems and Data	28%
Lack of Forensic Data	27%
Business Continuity	26%
Liability	24%
Fraud	24%
Disaster Recovery	23%
Having to Adopt New Security Tools	21%
Performance	19%
Not Sure/Other	8%

LOADSPRING

CRITICAL INTELLIGENCE ANALYSIS

The attention to detail in Mission Impossible is crucial to the end game. Having access to your data is vital to your business intelligence. Sift through vast amounts of data with ease, extract actionable information, and use it to streamline your operations. LoadSpring Cloud Platform offers built-in analytics via LoadSpringInsight, and LoadSpring experts can help build custom data sets and dashboards. LoadSpring*Insight* provides easy reporting, custom KPIs, and other meaningful insight tools that allow you to streamline your projects on the fly.

Building on what we've done with business intelligence has allowed us to create a powerful new service called Project**INTEL**. It enables broad analysis, which continuously improves over time as more data is collected. It provides more profound insight into your valuable project cost and risk data, utilizing custom PI indicators designed to increase project success and margins.

Project**INTEL** makes your project managers' jobs more manageable and pays dividends in the efficiencies created at every level. Gather intel on your operations—in a good way!

LOADSPRING

COMPLETING THE MISSION

While spy movies are entertaining, they're nothing like real life. Cloud services may seem daunting on your own, but the impossible becomes possible with the right team. What's complicated becomes doable. You can have faster software, secure data, and project intelligence that makes your operations increasingly efficient and competitive. LoadSpring Cloud Platform delivers every time.

If you're not feeling ready to hang onto the side of a departing plane, let LoadSpring experts guide you. Instead of plunging blindly, our team works with your cloud maturity level and helps plan carefully (without all the special effects) to grow your telecom company's cloud implementation strategy.

The cloud is the right place for telecom. High security, fast and flexible project applications, and enlightening analytics come with the territory.
